We are just in time for the greatest spectacle on earth: **the Eighth Wonder of the World – the Wildebeest Migration**. Over 1.5 million wildebeests migrate annually to Masai Mara in search of pasture. En route, thousands of wildebeests are carried into the raging waters while others are captured and killed by giant crocodiles. The wildebeests are closely followed by Burchell's zebras and impalas. Predators in packs of hundreds also follow and lay in wait for the animals that become weak or incapacitated during the long journey for a kill. We may be lucky to witness a leopard or a cheetah sprint and make a kill! We will return to the camp for dinner and stay another night.

Because of its biodiversity and ecological significance, **Serengeti National Park** has been listed by **UNESCO as a World Heritage Site**. Spectacular as it is, the crater accounts for a mere tenth of **Ngorongoro Conservation Area**. The crater is home to many species of wild game and birds, with the exception of cheetahs, impalas and topis (due to fierce competition with the wildebeest) and giraffes (not enough food at tree level). It has the densest population of predators in Africa and almost every species of African plain mammals live in the crater including the endangered black rhino. The birdlife, which includes the flamingo, is mainly seasonal and affected by the ratio of soda to fresh water in Lake Magadi on the crater floor. Dinner and overnight stay at the crater lodge.

Apart from its wildlife riches, the crater is of great archaeological importance, including the discovery of remains of some of mankind's earliest ancestors. The crater is also home to hundreds of bird species relaxing in the small lakes on the crater floor. We will go back to our lodge for dinner.
